Education

Wilfrid Laurier University

Sep. 2023 – Dec. 2026

Bachelor of Science in Computer Science

Waterloo, Ontario

- CGPA of **3.85**
- Relevant Coursework:** Data Structures & Algorithms, Object Oriented Programming, System Programming, Computer Network, Intro to Microprocessors, Database I,II)

Experience

Software Engineer Intern

May. 2025 – Sep. 2025

Bolttech

Kuala Lumpur, Malaysia

- Transformed **costly** UiPath automation into **serverless architecture** by implementing **Databricks**-powered **ETL** pipeline with **AWS Step Functions** and **Lambda**, achieving **\$50K+** annual savings and scaling to process **1 M+** daily inventory records across Europe.
- Achieved **90% cost reduction** and **\$600+** annual savings by replacing **n8n** with **AWS Lambda** for **SailPoint** access review automation, efficiently processing **150,000+** API calls monthly.

Software Engineer Intern

May. 2024 – Sep. 2024

Sensoft Technologies

Penang, Malaysia

- Developed a **scalable monitoring system** with **React Dashboard** for **15,000 IoT sensors** using **Modbus** protocols, improving **operational efficiency by 30%**.
- Built an **energy forecasting model** for a hotel, using **Prophet** and **OpenAI API** that achieved **80%+ prediction accuracy**, reduced energy costs by **15%**.
- Engineered a **real-time people detection system** using **YOLO** and **DeepFace**, delivering **sub-0.1-second response time**, **40% security improvement**, and **faster check-ins**.

Personal Projects

MentorTrader | Next.js, PostgreSQL, Stripe, AWS, Sentry

- Created a **marketplace platform** focused on connecting **day traders with credible online trading mentors**.
- Onboarded **120+ active mentors** and **2,000+ monthly visitors**, featuring **student management dashboards** and **partnerships** with fintech companies like **Kinfo**, **Whop**.
- Implemented using **Next.js** with **Supabase**, **OAuth2.0** authentication, **PostgreSQL** database, **AWS S3** storage, **Redis** caching, **Sentry** monitoring, and **Stripe** payment integration.

Faves | Express.js, Firebase, TailwindCSS, Google Cloud

- Working with an Apple engineer to build a **platform** that **curates recommendations** from **influential figures**.
- Allows users to browse **1,000+ recommendations** with detailed citations while enabling **public submissions** managed through an **admin approval workflow**.
- Built with **Node.js** and **Firebase** implementing authentication, rate-limiting, Joi validation, and reCAPTCHA security, with a responsive Bootstrap/Tailwind CSS frontend deployed on **Google Cloud Functions**.

URL Shortener Website | Ruby, HTML/CSS, JavaScript, PostgreSQL

- Built a **full-stack URL shortener** that converts long URLs into **compact, trackable** links with advanced analytics.
- Developed **advanced tracking system** capturing comprehensive **click metrics**, precise **visitor geolocation**, **referral sources**, and original page title extraction.
- Architected using **Rails 8**, **PostgreSQL**, and **Tailwind CSS** with **Docker** containerization, secured via **Rack::Attack**, **Cloudflare Turnstile**, and optimized through **Redis** caching and **Hotwire**.

Technical Skills

Languages: Python, Java, C, HTML/CSS, JavaScript, TypeScript, VBA, Ruby, SQL, Bash, **Clojure(learning)**

Developer Tools: VS Code, Docker, Google Cloud Platform, Vercel, Postman, Heroku, npm

Technologies/Frameworks/Libraries: Ruby on Rails, React, Next.js, Tailwind CSS, Flask, WebSockets, Redis, AWS, JWT, Linux, Git, Jest
